

Hearing loss: an issue for public health planning

IFOS: 11/11/2018

Pre course thinking and reading

Sue Archbold, PhD, Hon LLD

(with Brian Lamb, OBE)

This presentation will cover:

- The wide impact of hearing loss on adults and children
- The growing numbers globally
- The changing communication and hearing technologies
- The evidence of the impact of latest technologies
- Access to the latest technologies
- Public health planning: challenges and influences
- Examples of influencing globally
- Future challenges

Before the presentation on 11/11/2018

- Please think about the following questions
- Read the suggested papers/reports to stimulate your thinking on the topic
- The questions will be discussed in the presentation
- The presentation will be available after the event

General public health planning: what do you⁴ know?

- Look at www.gapminder.com
- Look at the slides and answer the questions
- Look at the changing facts and figures over time over countries...
- Does any of this have impact in thinking about hearing loss?

Hearing loss: why important

- Why is impact of hearing loss under recognised in both children and adults?
- What areas of life does hearing loss impact?
- Which areas might be important in public health planning and why?
- What other professionals are involved in managing those with hearing loss?
- What contact do you have with them?

What evidence of the diverse impact of hearing loss is there? read examples:

Why a public health issue?

- Who decides access to technologies and management?
- Who decides practice?
- Who funds?
- On what basis?
- What evidence do they need?
- Do you have contact with public health policy makers and/or funders of health care?

Influencing public health planning

- What impact of HL do you think might be of interest to public health planners?
- What will they need to know to make decisions?
- What evidence will they need?
- From whom? How presented?
- How access them?
